WEB DEVELOPER

Transform your skillset and launch a successful new career as a web developer.
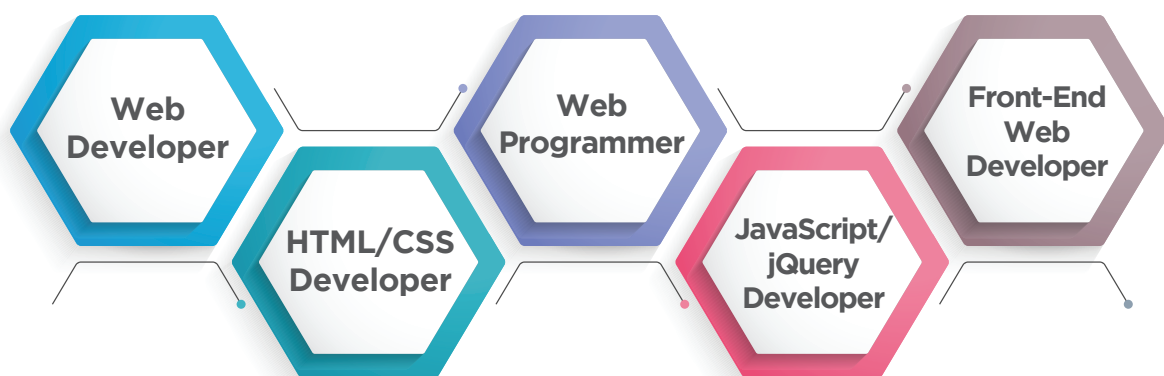

Web Development:

Tap into one of the most in-demand careers in the world today.

The Pitman Training **Web Developer Diploma** is for anyone seeking a dynamic career across a wide range of entry-level positions. Challenging and comprehensive, students learn the most in-demand **web development skills, techniques and tools.** Graduates can expect to excel in the essentials of computer programming – and **enjoy successful careers in IT.**

Web Developer

HTML/CSS Developer

Web Programmer

JavaScript/ jQuery Developer

Front-End Web Developer

Crack the code of building game-changing websites.

Students learn the coding languages required to be a front-end web developer and create dynamic websites. The programme covers the primary and in-demand web development programming languages – HTML, CSS, and JavaScript. **Upon programme completion, students will have built a strong portfolio** that they can confidently showcase to potential employers.

Build a stand-out portfolio of completed projects.

Supported by qualified tutors – experts who are practising web developers – students gain hands-on experience, working on a range of web development projects that build in complexity as coding languages and technology skills are added to the toolkit.

You will:

- Design the appearance and layout of websites
- Develop cross-browser, cross-platform websites
- Create and optimize content for websites using graphics, databases and other elements
- Translate wireframes and storyboards into functional, responsive websites

CORE COURSES

Computer and Technology Basics for Developers

Providing students with a firm foundation in technology fundamentals, this course was developed so that someone with no prior technology experience can fully understand computers.

Overview of Software Development

Offering the basics of computer programming, students will learn the fundamental concepts of coding without reference to a specific computer language.

Version Control

Equips students with the knowledge and skills to utilize version control systems, which is essential for successful team collaborations on code development.

HTML

Students will gain a thorough understanding of the concept of developing websites using HTML.

CSS and Bootstrap

Covers the essential knowledge and skills to use CSS and Bootstrap to develop esthetically appealing websites.

JavaScript

Students learn the fundamental elements of JavaScript and how to create programs and modify web pages using the JavaScript language.

Managing Software Development Projects

Designed specifically for those new to managing software development projects, students will gain a greater understanding of project management as it relates to software development.

Guideline learning time:

230 hours flexi study/10 weeks full-time (full-time based on 20-30 hours/week)
